For example, some students may test different inputs while others may rewrite  $(y=x(x+3)(2-x))$  as  $(y=-x^3-x^2+6x)$  and reason about the effect of the -1 coefficient on the leading term. Launch Since the focus of this warm-up is on structure, students should reason about the matches without using technology to graph the given equations.

Algebra I Class Worksheet #2 Unit 9 Solutions Solve each of the following systems of equations using the substitution method.

Once you know the value of  $x$ , you can substitute again to find  $y$ . It looks like this.  $10x - 9 = 11$  Now, just solve for  $x$ .  $10x = 20$   $x = 2$   
 $4x + 3(2x - 3) = 11$  We can substitute  $2x - 3$  for the  $y$  in the first equation.

Graphs, tables, and equations are used throughout the lesson to see the effect of scale factors in different ways. Throughout the lesson, encourage students to compare the language they use to describe a graphical transformation with how specific points are transformed and with the algebraic transformations of the equations (MP6).

Linear functions are reviewed from Common Core Algebra I in this 7 lesson unit. The slope-intercept and point-slope forms of a line are both used and applied in linear modeling problems. Inverse and piecewise linear functions are developed. Finally, 3 by 3 systems of linear equations are introduced . Subjects: Algebra 2.
