### Laparoscopic Gastric Bypass Operation Primers

Gastric bypass is a surgical procedure that is done to help obese people lose weight by changing the way stomach and small intestine handles the ingested food. The procedure is done under general anesthesia. The surgery is done in two steps. During the first step, the stomach is divided into two sections, a small upper section (also referred to as a pouch) and a large lower section, using staples.

### Gastric Bypass | Laparoscopic.MD

Laparoscopic gastric bypass is a different operation than the laparoscopic gastric sleeve. Although the incisions are similar, there are many physiological differences between the two operations. Those who undergo laparoscopic gastric bypass tend to lose more weight at quicker rate and maintain that weight-loss for a greater period of time.
